

Arena Conditioner

Sandman (SM)

Manufactured from high quality steel and finished with a 5 stage painting process culminating in oven curing for a hard wearing finish, the Fleming Sandman is the ideal arena conditioner for loosening and levelling the most crusted horse paddocks and riding arenas in one pass to leave a firm level surface to an even depth. The Arena conditioner is fitted on to the three point linkage and drawn on pneumatic wheels with the depth of the Sandman levelling bar set by the top link of the tractor. The spring steel tines have their own independent depth control so that no damage can be done to the underlying membrane. The Sandman can be equally effective with a quad by fitting a simple attachment.

- 5 stage painting and heat treatment process
- Easy three point linkage hook-up and setting.
- The independent depth control protects any underlying membrane.
- Optional draw bar for quad attachment
- Spring steel tines
- Reversible tine points for added life
- Pneumatic Tyres for smooth operation
- Rear Levelling bar leaves smooth even arena.
- Long life / low maintenance.
- Cat 1 lift pin
