

Slurry Pumps

The SP100 is designed for mixing slurry tanks and lagoons only. With all the trade mark features of Quality and strength that is expected from Fleming products, such as high output to low power requirement, precision flow positioning, unique impeller design reducing possible blockages, heavy duty gearbox with fully galvanised body.

SP100

- 3000 Litres per minute
- High flow low power requirement.
- 80HP - 120hp requirement
- Easy Quick attach hitch
- No requirement to remove PTO shaft
- Precision positioning facility for flow direction
- Hydraulic top link for precision control.
- Unique impeller design giving higher output and reduction on fuel consumption
- Fully galvanised for extended life
- Capable of mixing variable depth tanks and lagoons up to 2.5m deep.
- Compact design for manoeuvrability and easy access to tanks.
- Heavy Duty gearbox
- Shear bolt protected drive line
- Streamline flow for maximum thrust and mixing capability.
- Oversized marine bearing
- Cat 2 lift arm pins.
- Double jaw lift arm support
